EXPERIMENT - 4

Hash Cracking Using John the Ripper

Aim:

To demonstrate password hash cracking using the John the Ripper tool in Kali Linux for understanding password vulnerabilities and security analysis.

Procedure:

Step 1: Start Environment

Open Oracle VirtualBox and start Kali Linux.
Login to the system.

Step 2: Open Terminal and Verify Tool

Open terminal and check if John the Ripper is installed:

```
john --version
```

Step 3: Create Hash File

Create a file and store a password hash:

```
nano hash.txt
```

Step 4: Run Hash Cracking

```
john hash.txt
```

The tool attempts to crack the hash using default wordlists.

Step 5: View Cracked Password

```
john --show hash.txt
```

Output:

Result

Password hash cracking was successfully demonstrated, highlighting the need for strong passwords and secure hashing techniques.
